## Siliconized Screw Cap Microcentrifuge Tubes

Introducing...

### Bio Plas NEW SILICONIZED Screw Cap Microcentrifuge Tubes!

These tubes are ideal for packaging, transporting and storage of any diagnostic tests... especially, in the area of biotechnology, biological products and reagents.

#### Features:

- An extremely low surface adhesion, which is ideal for protein or nucleic acid studies to prevent any possible loss of sample due to adherence to the inner walls of the tube allowing complete sample recovery.
- A positive Screw Cap seal with an "O"-ring designed to provide a safe, reliable secure fit even for repeated cap closures.
- Can withstand centrifugal forces up to 25,000 x G and are available in four configurations of tubes, both sterile and non-sterile.
- A tight seal closure eliminates accidental opening during incubation, spinning or transporting.

### SPIN the BIO PLAS G-Tube™ ..... Now at over 30,000 x G!

- No special locking cap devices needed
- Highest impact tube strength with the smoothest interior surface
- Safe Sample Deposit
- Transparent

Designed for use in biotechnology laboratories such as preparing samples for thermal cycling or whenever complete sample recovery is important. These tubes are molded from a siliconized virgin polypropylene that exhibit extremely low surface adhesion providing maximum sample recovery.

## BIO PLAS Pestles

BIO PLAS disposable polypropylene pestles may be used to homogenize cells or resuspend precipitates such as protein or DNA pellets in buffer solutions. All the packaging options contain products free of detectable RNase, DNase, DNA and Pyrogens. These pestles and tubes are precision manufactured and quality controlled to firmly match together for maximum performance efficiency.

Pestles are conveniently packaged into the appropriate size tubes, ready for use. All pestles are RNase/DNase free and sterilized.

*BIO PLAS Pestle with 0.6mL "G"-Tube™*

*BIO PLAS Pestle with 1.5mL "G"-Tube™*
